

RDF Source Document

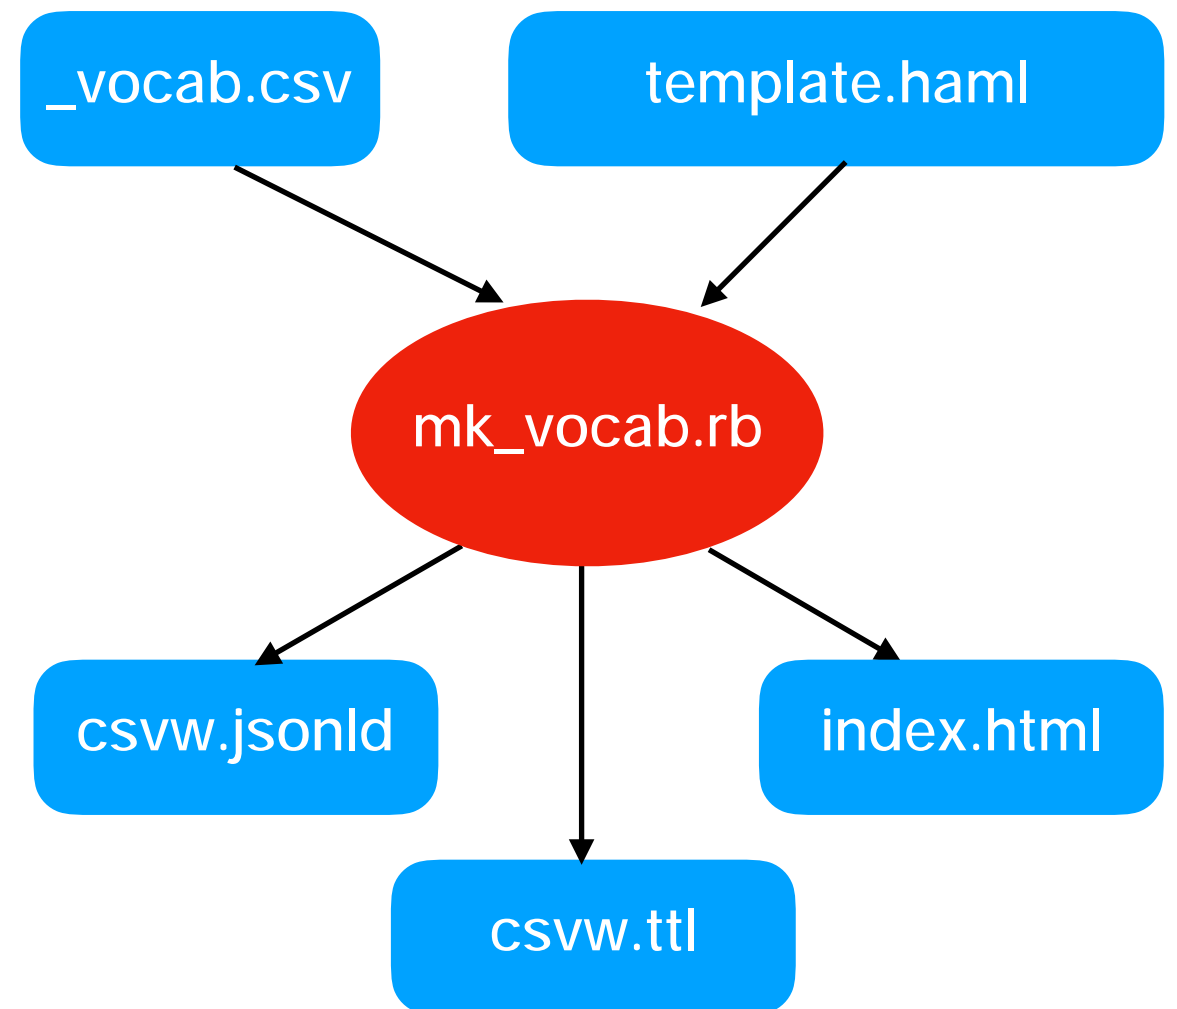

- Example: JSON-LD Test-Suite^{*}
 - Hand maintain Turtle RDFS document and JSON-LD context
 - Direct transform Turtle to JSON-LD
 - Use Haml template to generate HTML from JSON-LD.
 - Advantages: Single source, consistency
 - Disadvantages: Context made by hand. JSON-LD may not be convenient.

Vocabulary in CSV

- Examples: CSVW[1], ShEx[2]
 - Information in spreadsheet
 - script creates JSON object indexed by type
 - after processing, objects gathered into JSON-LD to describe both context and vocabulary
 - Custom Turtle generation
 - Haml template-based HTML generation
